World Tomato Congress is a meeting space for all those interested in expanding or exchanging their expert knowledge about tomato cultivation, the most produced vegetable in the world. The WTC focus on all aspects of tomato production and includes the participation of world-class experts to present their knowledge, the latest developments on the crop, as well as their vision of the future in the different areas of production, starting with varietal selection and its genetics, until the harvest of the fruit.

The phenotypic and genotypic diversity existing in tomato will be presented by HARNESSTOM coordinator including how the research of different European projects such as TRADITOM and HARNESSTOM are contributing to improve tomato characteristics in order to satisfy the demands of the different actors in the production and consumption chain as well as increase their tolerance to stresses associated with climate change and emerging diseases.

In addition to the scientific presentation networking is an important objective of the WTC and for this rooms will be provided with free access to congress participants, where work or business meetings can be held.
